

Example task: Add a calendar event

Add **Lab meeting** · Oct 6, 10:00

Add **Project review** · Oct 8, 14:00

Add **Reading group** · Oct 13, 11:00

Same procedure
Different inputs

Open → Fill → Save

Two ways to execute the task Agent: model calls for each task

Program: compile, then reuse

Compile

Extract inputs per use

Compilation attempt

Outcome

Token cost

</> **Verified program**

⊗ **Rejected early**

⊗ **Rejected after repair**

Costly failures leave no usable program

After successful compilation

Recovered

Unrecovered

Cost to recover

Many tasks

Tasks stop

GUI drift

Too few uses to recover compilation cost

(a) Uncertain compilation price

(b) Unknown future use
