

Example task: Add a calendar event

Add **Lab meeting** · Oct 6, 10:00

Add **Project review** · Oct 8, 14:00

Add **Reading group** · Oct 13, 11:00

Same procedure
Different inputs

Open → Fill → Save

Two ways to execute the task Agent: model calls at each step

Program: compile, then reuse

Compile

Extract inputs per use

Compilation attempt

Outcome

Token cost

</> Program

⊗ Failed early

⊗ Failed after repair

🗑 Costly failures leave no usable program

(a) Uncertain compilation cost

After successful compilation

Recovered
Unrecovered

Cost to recover

Many tasks

Tasks stop

GUI drift

🗑 Too few reuses to pay back the cost

(b) Unknown future use
